Abstracts

The global Automotive 3D Printing market was valued at 94.02 Million USD in 2021 and will grow with a CAGR of 19.15% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The global automotive 3D printing market identifies the introduction of low-cost entry level 3D printers as one of the major factors that will have a positive impact on the market's growth. The availability of entry-level printers will influence tier-2 and tier-3 plastic parts manufacturers and automotive suppliers to adopt 3D printing technology for manufacturing small parts including dampers and bearings. Moreover, the development of affordable entry-level 3D printing technology will increase the adoption and will subsequently reduce the cost of high-capability 3D printers that are currently being used only for industrial applications, in turn, increasing their adoption. In terms of geographic regions, the Americas will be the major revenue contributor to the market throughout the next few years. Benefits such as the ability to build complex shapes using fewer parts, less material wastage, and the ability to build lightweight products that help in saving fuel costs, is inducing major automotive manufacturers in this region to adopt 3D printing.
