The global Automotive Air Conditioning Electric Scroll Compressors market was valued at 629.37 Million USD in 2021 and will grow with a CAGR of 2.99% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The automobile air-conditioning compressor is the heart of the automobile air-conditioning refrigeration system, which plays a role in compressing and transporting refrigerant vapor. The scroll compressor is composed of an end plate and involute scroll teeth extending from the end plate. It has many advantages. For example, the compressor is small in size and light in weight, and the eccentric shaft driving the moving turbine can rotate at a high speed. Because the scroll compressor can operate reliably without the suction valve and the exhaust valve, and it is easy to realize variable speed movement and variable displacement technology. Multiple compression chambers work simultaneously and the gas pressure difference between adjacent compression chambers is small so that the gas leakage is small. There are three types of Automotive Air Conditioning Electric Scroll Compressors around the world, below 25 cc/r, 25~40 cc/r and above 40 cc/r. Japan is the largest production market of Automotive Air Conditioning Electric Scroll Compressors, accounting for 42.84% of the global production market in 2019, while China and South Korea were about 28.92% and 14.06%.
