The global Automotive Air Filters market was valued at 4951.39 Million USD in 2021 and will grow with a CAGR of 7.03% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Air filters improve horsepower and mileage of an automotive. They also improve air flow to the engine and emission control system, enabling proper ignition of fuel. The production of air filters has gained momentum because of the high aftermarket demand, as they need to be changed at regular intervals. There are two types of automotive air filters: cabin type and intake air filters. One of the primary drivers for this market is the exponential increase in the emission of greenhouse gases. It has been observed that a majority of premature deaths of people is mainly attributed to the long-term exposure to particulate engine emissions like nitrogen dioxide, carbon monoxide, sulfur dioxide, and hydrocarbons. Consequently, government bodies worldwide have formulated vehicular emission norms for checking the particulate emissions. For instance, the Euro emission standards formulated by the European Union, Corporate Average Fuel Economy (CAFE) standards formulated by the US, and the Japanese new long-term emission standards are some of the existing emission standards being implemented. Moreover, the US, European Union countries, and China are focusing on going green by reducing the carbon emissions significantly. This will result in a reduction of carbon emissions, which in turn, will propel growth in the global automotive air filter market.
