Abstracts

The global Automotive Coolant market was valued at 5403.21 Million USD in 2021 and will grow with a CAGR of 2.14% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Automotive coolant, also known as antifreeze, is a liquid substance that circulates through an internal combustion engine and draws off excessive heat. The two most common chemicals used for this are ethylene and propylene glycol, both of which have lower freezing points than water (32° Fahrenheit or 0° Celsius). This allows the chemicals to flow freely even under cold winter conditions. Automotive Coolant also has a higher boiling point than pure water, which makes it ideal for summer use as well. Recently, ethylene glycol and other type automotive coolant is the mainstream product, which take up a larger market share. While ethylene glycol type automotive coolant is toxic and corrosive, the product is harmful to engine. Propylene glycol type automotive coolant is environment-friendly. But cost of the product is high, and technology needs further exploration. Price of ethylene glycol type automotive coolant is relatively low compared to propylene glycol type automotive coolant. Automotive coolant, especially the environment-friendly products, will be popular in the future. For the increasing demand of automotive coolant, investors will be optimistic about this area. While for the relatively permanent leading status of the major players, the new enters still face lots of challenges.
