The global Automotive Electric Fuel Pumps market was valued at 1196.84 Million USD in 2021 and will grow with a CAGR of 3.84% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Fuel pumps are one of the most important components in vehicles, and they pump fuel from the fuel tank to the engine. Fuel pumps are of three types: mechanical, electric, and turbo. Though mechanical fuel pumps were used in vehicles previously, advances in technology and growing pressure of improving fuel efficiency have led to the increased use of electric fuel pumps. There is a growing pressure felt by automakers worldwide to adhere to the new stringent vehicle emission standards. To achieve this, automakers have shifted their focus toward reducing vehicle emission levels in new upcoming models. Automakers worldwide have increased their R&D spending to develop vehicles with enhanced fuel efficiency and better power output.
