The automotive electronic control unit refers to a control device that is composed of integrated circuits and is used to implement a series of functions such as analyzing and processing data. Widely used in the car, and the integration is getting higher and higher. The automotive electronic control unit is mainly composed of input circuits, A/D (analog/digital) converters, microcomputers and output circuits. The high demand for automotive electronic control units is due to the growth in awareness of fuel efficiency and emission control among the manufacturers. An automotive electronic control unit is embedded systems that controls electrical subsystems in a vehicle. The various types of electronic control unit include Engine Control Module (ECM), Powertrain Control Module (PCM), Transmission Control Module (TCM), Brake Control Module (BCM), Body Control Module (BCM) and Suspension Control Module (SCM). These components transmits the vehicle performance to the electronic control unit. The driving factor for the growth of electronic control unit market are low emission and higher fuel efficiency, increasing sales of new vehicles, strict government regulations on reducing vehicle emission, technological advancements and emerging economies. However, the high cost of electronic control unit system acts as a barrier for the growth of automotive

electronic control unit market.
