## Abstracts

The global Automotive Energy Recovery System market was valued at 110.3 Million USD in 2021 and will grow with a CAGR of 5.47% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Automotive energy recovery system utilizes dissipated energy to perform various functions in a vehicle such as to provide power to engine or batteries and to enhance engine efficiency by recycling exhausted gasses. The utilization of dissipated energy improves the overall performance of a vehicle and reduces the emission of greenhouse gasses. Most of the electric vehicles are equipped with the regenerative braking system, whereas turbocharger and exhaust gas recirculation have greater penetration in diesel- & gasoline-powered vehicles. The global automotive energy recovery system market is driven by stringent vehicular emission rules & regulations, increase in trend of engine downsizing, and stringent fuel economy standards. In addition, rise in a number of electrical vehicles & EVSE infrastructure and improved vehicle performance fuel the market growth. However, increase in overall cost & weight of vehicles and high repair & maintenance cost restrain the growth of the market. Irrespective of these challenges, increase in concerns about environment and advancement in technology, such as introducing waste energy recovery system in two-wheelers, are expected to provide various opportunities for new products and boost the market growth.
