The global Automotive Front End Module market was valued at 65.8 Million USD in 2021 and will grow with a CAGR of 4.24% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Automotive Front End Module is consists of building the automotive front end off line, and installing the entire module as one complete assembly on the vehicle rather than building up the front end vehicle component by component. The Front End Module is the aggregate of components located in its front part which carry out many functions (esthetical, structural, aerodynamically, engine cooling, and safety) and which are preassembled as subassembly ready to be installed into the vehicle. The Front End Module included many components, such as Radiator, Condenser, Core Support, Headlight, Front Grill, Bumpers, Fenders, Crash Management System, and Others. The trend of Front End Module (FEM) modularization is gaining traction, as modularization helps OEMs save on cost, time, and manpower during the manufacturing process. Previously, each and every component of the FEM was assembled by OEMs on the assembly line; this was time-consuming and extended the production process of the vehicle. However, the advent of modularization has enabled OEMs to save on these costs and opt for outsourcing these functions. OEMs save around 20 to 30% of costs through modularization, in comparison with the traditional front-end methods. The Automotive Front End Module industry is highly concentrated, the top three

manufactures accounting for more than 75% in Europe, and have a rapid growth to North America, Asia and other regions.
