Abstracts

The global Automotive Lens market was valued at 1009.7 Million USD in 2021 and will grow with a CAGR of 14.43% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

With the improvement of automotive intelligence, the demand for automotive lenses will increase rapidly: vision applications are considered to achieve the next important comfort and safety function in the process of autonomous driving. In addition, it has become the standard for autonomous driving and ADAS applications, enabling sensor fusion technology. This technology combines and processes information collected from on-board cameras and radar to identify the environment around the car. All cars are expected to be equipped with a 360-degree surround view system. In addition, rear-view mirrors will be replaced by on-board cameras, and autonomous driving will require driver monitoring to improve safety. Electronic rear-view mirrors based on vehicle cameras will implement object detection, viewing angle modification, and zoom functions. The industry's leading producers are Sunny Optical Technology, Sekonix and Nidec Sankyo, with revenue ratios of 29.87%, 8.54% and 7.26%, respectively, in 2019.
