The global Automotive Metal Stamping market was valued at 7079.89 Million USD in 2021 and will grow with a CAGR of 3.97% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Stamping (also known as pressing) is the process of placing flat sheet metal in either blank or coil form into a stamping press where a tool and die surface forms the metal into a net shape. Stamping includes a variety of sheet-metal forming manufacturing processes, such as punching using a machine press or stamping press, blanking, embossing, bending, flanging, and coining.[1] This could be a single stage operation where every stroke of the press produces the desired form on the sheet metal part, or could occur through a series of stages. The process is usually carried out on sheet metal, but can also be used on other materials, such as polystyrene. Stamping is usually done on cold metal sheet. See Forging for hot metal forming operations. India is expected to growth a CAGR of 9.2% over the forecast period on account of the rising demand for vehicles coupled with initiatives taken by the government to promote vehicle manufacturing in the country. In addition, the growing investment of the major vehicle manufacturers in is likely to drive the demand for stamped parts in the country. Recovering Eurozone and rapid economic growth in Asia Pacific countries, primarily in Indian and China is expected to fuel demand in the automotive sector, driving the demand for automotive metal stamping market over the forecast period. However,

tightening access to finances is affecting the Brazilian manufacturing growth hamper demand in the country.
