The global Automotive Micro-electromechanical System (MEMS) Sensors market was valued at 2028.89 Million USD in 2021 and will grow with a CAGR of 10.74% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

An automotive MEMS sensor refers to the micro-electro mechanical system used in automobile applications. An automotive device is efficient when it is capable to manage the synchronization between the sensors and actuator, while achieving high performance with low cost. MEMS sensors in an automotive provides an enhancement in the reliability of the device along with smaller size. The growing need for inter vehicle communication (connected car) and increasing adoption of advance driver assisted system (ADAS) has led to the integration of multiple sensors in automobile. Vehicle dynamic control (VDC) for ordinary passenger cars has become practical due to the advent of MEMS sensors in an automotive. It is playing a vital part in safety applications of the vehicle and automotive infotainment.
