The global Automotive Power Management IC market was valued at 445.58 Million USD in 2021 and will grow with a CAGR of 3.29% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Power Management Integrated Circuits (PMIC) are used to manage power requirements and to support voltage scaling and power delivery sequencing in power electronic devices. They are the key components in any electronic device with a power supply, battery, or power cord and they optimize power usage. Power management IC are high-precision products, this industry need a long product development cycle, design requirements, capital investment, complex technology process, with a higher threshold. Therefore, it formed a high degree concentration, monopolized by large semiconductor manufacturers. The profitability of individual companies depends on their ability to bid accurately, secure contracts, and control costs. Large companies enjoy economies of scale in financing and the ability to offer a broad range of services in many locations. Smaller companies can compete effectively by specializing in particular services or focusing on a certain geography. To capitalize on market opportunities in the new growth cycle, chipmakers need to make fundamental, structural improvements by means of improving research and development, innovative supply chains, transformation of sales force etc., This tends to attract more investments and revenues in the sector.
