The global Automotive Protection Films market was valued at 272.87 Million USD in 2021 and will grow with a CAGR of 2.71% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Automotive protection films are used for protecting vehicles while being transported before delivery to their buyers. These films protect vehicles from both mechanical damage and biological chemicals such as bird droppings. Using film is much less expensive than other protective techniques such as putting on a hood. Further typical automotive application for films are protecting entrance strips, carpets, bumpers, lights, aluminum hubcaps, back shelves as well as parts in and around the dashboard. The polyurethane films market size was the largest segment in 2017 and is expected to grow at a CAGR of 4.07% over the forecast period. The PU films exhibit superior chemical and mechanical stability, as a result of which, these products are used in numerous applications. The growing demand for paint protection in automobile exteriors is expected to drive the market demand. Polyethylene-based products account for a significant share on account of the wide application scope of the material and easy availability in the country, in addition to the presence of key manufacturers and distributors.
