The global Automotive Temperature Sensor market was valued at 9749.65 Million USD in 2021 and will grow with a CAGR of 4.32% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Temperature sensors are used to measure the temperature by converting thermal energy into electrical energy. This information is then sent to the electronic control unit (ECU), which calculates appropriate algorithms based on the data to keep the vehicle running in good condition. By product, the market for MEMS temperature sensors is estimated to experience the highest growth during the forecast period. With the development of advanced technologies, the use of advanced MEMS temperature sensors has increased. MEMS, IC sensors, and infrared temperature sensors are expected to be future technologies, due to increasing luxury vehicles around the globe and reduction of the wiring harness.
