Automotive wire is an important part of automotive electronic control system. It is bonded, twisted, or braided together to form a single assembly as the circuit in an automotive. Automotive wires are used to transmit electric power, data and other signals as voice in the vehicles. The working environment required the wire to have characteristics like high temperature resistant. Wire are vital components within modern transportation platforms such as aircraft and automobiles, distributing power and signals between the various devices that deliver electrical and electronic functionality. Currently, there are many producing companies in the world Vehicle Wire Markers industry, especially in North America and Europe and Japan. The main market players are Yazaki Corporation, Sumitomo, Delphi Automotive, Leoni, Lear Corporation, Yura, Fujikura, Furukawa Electric, PKC, Nexans Autoelectric, Kromberg&Schubert, THB, Coroplast and ect. Vehicle Wire is also costly. For this reason, harness manufacturers are under relentless pressure to reduce costs. Harness manufacturing is logistically complex. Each harness comprises hundreds or even thousands of components that are assembled via a sequence of operations to create the final product.
