## Abstracts

The global Autonomous and Semi-autonomous Tractors market was valued at 1133.26 Million USD in 2021 and will grow with a CAGR of 17.48% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Autonomous and semi-autonomous tractors are a ground-breaking innovation for the agricultural sector. This innovation is anticipated to boost agricultural produce with minimal labor cost engagement. Autonomous and semi-autonomous tractors minimize the human effort required in farm processes such as harvesting, seed sowing, fertilization, and scarifying. Semi-autonomous tractors reduce human effort by assisting the driver in certain actions, while autonomous tractors are fully, driverless tractors, which completely replace the driver with several software and hardware components. North America and Europe have witnessed a rise in adoption of precision agriculture in the last few years. Availability of large fields, limited labor availability, and massive grasslands in these regions and high per capita income are major factors driving the autonomous and semi-autonomous tractors market in these regions.
