Autologous blood transfusion is a safe blood transfusion method that collects the blood or blood components of the patient's own blood. After storage or certain treatment, it is returned to the patient during or after surgery. Autologous blood transfusion includes storage autologous blood transfusion, recovery autologous blood transfusion, and diluted autologous blood transfusion. Autologous blood transfusion can avoid the hemolysis reaction, fever and allergies that may be caused by the input of allogeneic blood, and can also avoid the host's anti-host reaction, and avoid the immune function of the recipient due to the input of allogeneic blood.
