## Abstracts

The global Aviation Actuator Systems market was valued at 818.55 Million USD in 2021 and will grow with a CAGR of 4.08% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Actuators in aircraft play a vital role for flight and control; often their operation ensures the safety of the aircraft and every passenger on board. In the past, airplanes have been fitted with hydraulic actuators. Airline companies are beginning to fit airplanes with electric actuators, because of better technology and more reliability. These heavy-duty linear actuators are manufactured to stand up to high pressure, peaking sometimes above 5,000psi. Because they are very close to the ground at high speeds, they must be built incredibly strong so they are not damaged by debris that is kicked up by wheels. North America is expected to exhibit high growth over the forecast period. North-American Airlines is expected to invest in the redesigning process of international wide-body aircraft. Air traffic in Europe is expected to increase, requiring significant upgrading. Manufacturers in this region are aiming at emission free and fuel-efficient aircrafts with efficient aviation actuator systems.
