### Abstracts

The global Awnings market was valued at 6006.02 Million USD in 2021 and will grow with a CAGR of 3.46% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

An awning or overhang is a secondary covering attached to the exterior wall of a building. It is typically composed of canvas woven of acrylic, cotton or polyester yarn, or vinyl laminated to polyester fabric that is stretched tightly over a light structure of aluminium, iron or steel, possibly coated or transparent material (used to cover solar thermal panels in the summer, but that must allow as much light as possible in the winter). The configuration of this structure is something of a truss, space frame or planar frame. Awnings are also often constructed of aluminium understructure with aluminium sheeting. These aluminium awnings are often used when a fabric awning is not a practical application where snow load as well as wind loads may be a factor. North America is a major market and will show high growth on account of high use in residential sector. In addition, the region is expected to witness substantial growth on account of rising textile industry mainly in the U.S. and Canada. Asia Pacific is expected to witness immense industry potential owing to growth in the construction industry, particularly in China, India, Australia, Singapore, Malaysia, Thailand, and Vietnam. Moreover, presence of numerous coated fabric manufacturing plants in the region is expected to spur market growth.
