Abstracts

The global Baby Food & Drink market was valued at 6739.51 Million USD in 2021 and will grow with a CAGR of 7.56% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Baby food is any soft, easily consumed food, other than breastmilk or infant formula, which is made specifically for babies. The food comes in multiple varieties and tastes. Most infant formula is made with cow`s milk, but it has been modified and supplemented with additional nutrients. As a result, the formula is more nutritious and easier for the baby to digest than cow`s milk. Other formula options include soy-based formulas and hypoallergenic (or protein hydrolysate and amino acid-based) formulas. Increasing incidences of malnutrition among children has spurred the global demand for nutritional baby foods. The overall food and beverage industry has witnessed a steady rise in the production of baby foods over the past few years. Parents with traditional approach towards providing nutrition to their babies are shifting to baby foods.
