Backlight module provides light source to the LCD panel , because the LCD itself does not radiate. In order to allow users can clearly see the picture on LCD displayer , we set up the backlight module to illuminate the LCD panel .From this ,we can see the information on LCD display. Therefore, 'Backlight Module' is one of the key components of the LCD panel. The backlight module is composed of the light source, light guide plate, optic films, and other mechanical parts .This industry will form a complete production line by integration of upstream and downstream industries. Due to backlight module is not a highly technological industry, small enterprises will be hard to develop themselves if they have not price advantage or excellent economic power.
