Abstracts

The global Backup Power market was valued at 1432.17 Million USD in 2021 and will grow with a CAGR of 4.82% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Power outages can be caused due to natural calamities, overload, or equipment failures. It is a recurring problem that disrupts the operations in residential, commercial, and industrial sectors. The monetary losses incurred vary from sector to sector and can run into millions. Therefore, to minimize the losses and stay protected against utility power outages, backup power systems are being adopted where the momentary power outages do not disrupt the operations. For instance, installing a diesel generator for emergency backup can meet the full load that it is designed for under 10 seconds. The availability of diverse backup power systems is one of the primary drivers for market growth. Traditionally, diesel power generators were used for backup power due to their relatively low price and the easy availability of diesel. However, over the years the increasing emission concerns due to the utilization of traditional power generators has led to the rise of alternate sources such as battery energy storage systems, hybrid power, and fuel cells. APAC is the fastest-growing segment of the backup power market, expected to showcase a CAGR of nearly 6% through the forecast period. The unreliability of grid power infrastructure in the developing countries of the region has created a strong need for backup power sources. The EU is encouraging distributed

generation by providing feed in tariffs and incentives, which is driving the installation of off-grid energy systems such as fuel cells and battery energy storage systems.
