Balanced Armature Speakers are based on balanced armature technology (BAX) and are utilized in a variety of high performance audio and communication products. Balanced armature drivers use an electronic signal to vibrate a tiny reed that is balanced between two magnets inside a tiny enclosure. The motion of the reed is transferred to a very stiff aluminum diaphragm. This diaphragm is free of resonances in the audio band, allowing it to produce excellent clarity. The technical barriers of Balanced-armature Magnetic Speakers are high, and the Balanced-armature Magnetic Speakers market concentration degree is relatively higher. The manufacturing bases concentration around the world in terms of geography; some of the key players dominating this market are Knowles, Sonion, Bellsing, SYT Audio, Sony and others. The key factors driving the growth of the aforementioned industry are widely used in headphones and hearing aid industries. With the improvement of application in headphones and hearing aid industries, the increased consumption of Balanced-armature Magnetic Speakers are expected to continue in the next five years. In the past few years, as the main raw material price was relatively stable, with the addition of a sharp increase in production capacity, expected that the Balanced-armature Magnetic

Speakers raw material price will be stable in the short term. However, the improvement of energy, transportation costs, and employee wages, will play a significant role in promoting the cost of Balanced-armature Magnetic Speakers.
