The global Ball Bearing market was valued at 2997.77 Million USD in 2021 and will grow with a CAGR of 3.13% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A ball bearing is a type of rolling-element bearing that uses balls to maintain the separation between the bearing races. The purpose of a ball bearing is to reduce rotational friction and support radial and axial loads. It achieves this by using at least two races to contain the balls and transmit the loads through the balls. In most applications, one race is stationary and the other is attached to the rotating assembly (e.g., a hub or shaft). As one of the bearing races rotates it causes the balls to rotate as well. Because the balls are rolling they have a much lower coefficient of friction than if two flat surfaces were sliding against each other. Ball bearings tend to have lower load capacity for their size than other kinds of rolling-element bearings due to the smaller contact area between the balls and races. However, they can tolerate some misalignment of the inner and outer races. For the major players of Ball Bearings, SKF maintained its first place in the ranking in 2019, followed by Schaeffler, NSK, NTN and JTEKT. The Top 5 players accounted for 52.34% of the Global Ball Bearings revenue market share in 2019. The sales market for Ball Bearings can be divided into five geographic regions. Asia-Pacific occupied the largest revenue market share with 47.61% in 2019 and was followed by Europe and North America. On the basis of the

product type, Deep Groove Ball Bearings Type segment is projected to account for the largest production volume market share during the forecast period; this segment was estimated to account for 42.89% share in 2019 in terms of volume.
