A barcode scanner or reader is an input device that captures and reads the information in a barcode. Basic scanners simply record and translate the barcode into numbers and/or letters, that code must be sent to a computer database for further information. This can be done with a wired connection (such as through a serial or keyboard port) or wirelessly.Mobile computers are full independent computers that integrates all the necessary peripherals and interfaces needed for collecting, manage, and store the data gathered via barcodes. Mobile computer integrates, in a small form factor, all the necessary components of a computer, such has a display, a Wi-Fi system, an operating system, a keyboard, a battery and a professional scan engine. In addition to these features, mobile computer sports a rugged enclosure, able to withstand drop from various heights and to work in harsh situations. The rugged enclosure allows the devices to operate in all kind of professional conditions and resist to shocks, direct waterjets or very dusty environments. Mobile devices are the daily companion in activities like inventory, price check, pick and drop, assisted sales, delivery, quality control, curb-side pick-up, etc. With versatile portfolio of mobile computers, customers
