Abstracts

The global Bare Metal Stents market was valued at 1314.83 Million USD in 2021 and will grow with a CAGR of 3.39% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Bare metal stents are usually metal and have no special coating. They act as scaffolding to prop open blood vessels after they are widened with angioplasty. As the artery heals, tissue grows around the stent, holding it in place. However, sometimes an overgrowth of scar tissue in the arterial lining increases the risk of re-blockage. It is a mesh-like tube of thin wire. The first stents licensed for use in cardiac arteries were bare metal - often 316L stainless steel. The growth of this market is driven by the technological advancements, increasing number of percutaneous coronary intervention (PCI) procedures, rising burden of CAD, increasing demand for minimally invasive procedures, and rising geriatric population.
