Undertaking a bariatric surgery has become relatively necessary for the majority of the global population, especially the obese and the overweight demographic. The fact that obesity is one of the most prevalent and endangering health disorders has increased the awareness about bariatric surgery and devices. The demand for bariatric surgery devices has registered a considerable surge by the virtue of growing preference for less-invasive bariatric surgeries. Additionally, the rising expenditure on weight loss procedures has promoted the sales of bariatric surgery devices at the individual level. Regional government initiatives are also influencing the growth of the global market for bariatric surgery devices. The North America bariatric surgery devices market was the largest in 2017, owing to high obesity rates along with huge government supported funding and research activities undertaken by the industry players to evaluate the efficiency of their surgeries to treat obesity.
