Basalt Fiber is a material made from extremely fine fibres of basalt, which is composed of the minerals plagioclase, pyroxene, and olivine. It is similar to carbon fibre and fibreglass, having better physic mechanical properties than fibreglass, but being significantly cheaper than carbon fibre. It is used as a fireproof textile in the aerospace and automotive industries and can also be used as a composite to produce products such as camera tripods. Fiber manufacturer must continue to strengthen internal technological innovation, improve product quality, also has the external dual role: materials suppliers and solutions providers. The degree of Basalt Fiber technological innovation directly determines the development speed and the development space of Basalt Fiber industry, and even the success or failure of Basalt Fiber industry.
