Abstracts

The global Battery Monitoring Systems market was valued at 22.56 Million USD in 2021 and will grow with a CAGR of 18.38% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Battery monitoring systems comprise monitoring and control units, sensors, and software that are used to maintain and monitor battery health under optimal condition to make sure that it is performing to its full potential. The numerous advantages that batteries offer over other similar energy storage technologies and technological developments in different battery technologies have increased the adoption of batteries for energy storage used in emergency and grid-scale applications. The use of these cells in highly demanding conditions where they regularly operate outside the quantified state leads to quicker degradation of the cell, thereby upsurging the chances of failure. The need to prevent unplanned outages, increasing demand for electric vehicles, and improved operational efficiency of batteries have boosted the demand for battery monitoring systems. In addition, increasing renewable power generation and the growing use of battery monitoring systems in data center applications would further aid the growth of this market. The high costs of battery monitoring systems for larger battery solutions would act as a restraint for the battery monitoring system market. The increasing market for green data centers is one of the key trends that will contribute to the growth of this market in the forthcoming years. One of the main issues faced by data

center operators in developed countries are high power consumption and carbon emissions. This has resulted in creating awareness among enterprises to set up green data center facilities where energy-efficient operations lower the electricity consumption rates and carbon footprints. The Americas is expected to be the major revenue contributor to the battery monitoring systems market throughout the forecast period due to the increases in demand for battery monitoring solutions in the region.
