Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Battery Separator Films are kind of diaphragm material between the cathode and the anode in a battery to insulate electrons while freely transit the electrolyte ions. It is the separation of charge that allows the battery to generate electricity. Lithium battery and lead battery are two main batteries in nowadays market. Battery separator films, the analyzed object in this report, are widely used in the former. Battery Separator Films are polypropylene (PP), polyethylene (PE), or trilayer PP/PE/PP electrolytic separator membranes which play a critical role of separating the cathode from the anode. It is widely used in consumer electronics, power vehicle, electric power storage, industrial use. The lithium battery cell, where battery separator films are widely applied, is composed of cathode material, anode material, electrolyte and separator, of which, lithium battery separator as a high value-added material with the highest technical barrier among lithium battery materials accounts for about 15-20% of the battery cost. The main role of the separator film is to separate the positive and negative electrodes of the lithium-ion battery, thus preventing two neighboring contacts from a short circuit.
