The global Bearing Isolators market was valued at 1225.58 Million USD in 2021 and will grow with a CAGR of 3.19% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Bearing isolators are installed in equipment which have rotating parts. They are used to reduce friction of the moving parts in the equipment to prevent wear and tear and also to expand the lifetime of the rotating equipment. Most bearing isolators consist of a dynamic seal which includes a rotor and a stator which are attached to the shaft. Based on material type, metallic is expected to be the fastest-growing segment of the bearing isolators market during the forecast period. The growing demand for metallic bearing isolators from the oil & gas and chemical industries is one of the key factor fueling the growth of the bearing isolators market globally.
