The global Betaine market was valued at 2914.08 Million USD in 2021 and will grow with a CAGR of 3.25% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A betaine in chemistry is any neutral chemical compound with a positively charged cationic functional group such as a quaternary ammonium or phosphonium cation that bears no hydrogen atom and with a negatively charged functional group such as a carboxylate group that may not be adjacent to the cationic site. A betaine thus may be a specific type of zwitterion. Historically, the term was reserved for TMG (trimethylglycine) only. Biologically, betaine is involved in methylation reactions and detoxification of homocysteine. In biological systems, many naturally occurring betaines serve as organic osmolytes, substances synthesized or taken up from the environment by cells for protection against osmotic stress, drought, high salinity, or high temperature. Intracellular accumulation of betaines, non-perturbing to enzyme function, protein structure, and membrane integrity, permits water retention in cells, thus protecting from the effects of dehydration. It is also a methyl donor of increasingly recognised significance in biology. The betaine market is estimated to grow with its increasing application in food, feed, and other industries such as cosmetics and detergents. The usage of betaine in the food industry has increased in the past few years, owing to the rising consumer awareness regarding health benefits related to the consumption of

betaine. It is majorly used in functional drinks to increase the nutritional value. The prime reason for the increased demand and usage in the food industry is the rising demand among consumers regarding the usage of natural products in beverages. It is also used in the over-the-counter products, such as digestive aid and stomach acidifier. Over-consumption of the product is expected to pose side effects. This is anticipated to hinder market growth over the forecast period. Recent product developments including product in new hydrochloride form is expected to enhance market growth over the forecast period. North America dominated the global market and is estimated to witness stagnant growth rates over the forecast period. Asia Pacific is estimated to overtake North America by 2020 in terms of demand and become the largest regional market over the forecast period on account of increasing consumption of health drinks and dietary supplements in emerging economies of India and China.
