The global Bio Alcohol market was valued at 7226.63 Million USD in 2021 and will grow with a CAGR of 4.92% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Bio alcohols are sustainable organic chemicals that possess important physiological properties through the fermentation of sugar or cellulose. Bio-alcohols are environment-friendly and mainly used in transportation as an alternative to gasoline. A key driver of the global bio alcohol market is the imminent shortage of fossil fuels and the growing pollution problems their consumption is creating. The use of bio alcohol will help control the greenhouse effect to a major extent, reducing various regions' carbon footprint. Apart from this, the power potential of bio alcohols is also high, making it a highly feasible class of fuels to be used at large scales. From a regional perspective, the bio alcohol market for developed economies in Europe and North America has always been significant. The future of this market will, however, be directed largely by the emerging economies, owing to the high potential they hold in terms of production and demand for bio alcohol.
