The global Bio-based Platform Chemicals market was valued at 932.9 Million USD in 2021 and will grow with a CAGR of 11.12% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Platform chemicals represent a group of twelve (one not commercialized yet) building block chemicals that can be produced from sugars via biological conversions. Increasing acceptance of bio-based platform chemicals in industries, stringent government guidelines on conventional petroleum based chemicals and preference towards environmental friendly applications by consumers are main drivers for Bio-based Platform Chemicals market. The evolution of bio-refineries has driven the development of bio-based platform chemicals as an alternative to petrochemicals. Due to increasing government concerns regarding health, the environment and limited fossil resources, there is a growing interest in using sustainable technologies to produce chemicals, plastics, and other products from renewable resources. The bio-based platform chemicals offer great potential for decarbonizing everyday products, allowing everything from running shoe soles to plastics and car parts, to become bio-based. These trends are successful in creating a huge demand for bio-based platform chemicals market. Though North America is the largest regional market for global bio-based platform chemicals market, Asia-Pacific is also an equally important market as it represents the second largest and regional market with highest growth rate during the forecast period.
