Bio-Energy is renewable energy made available from materials derived from biological sources. Bioenergy is the energy which is stored in biological matter or ?biomass?. This can be anything from plants to straw to slurry to food waste and even sewage. When these materials are used for their energy content, they are referred to as ?feedstocks?. Sometimes feedstocks are grown specifically for their bioenergy content (known as ?energy crops?), while others are waste products from industries such as agriculture, food processing or timber production.
