Biodegradable mulch films have been available on the market for more than 15 years, backed by solid scientific and technical knowledge, and meeting a high level of acceptance among European farmers growing fruits and vegetables. They play an essential role in modern agriculture as they deliver positive agronomical effects such as increasing yield, improving quality of crops, weed control, and reduction of water irrigation and pesticides. Additionally, they offer distinctive advantages at the end of the crop cycle as they can be left on the field and ploughed under, which significantly reduces the agricultural plastic waste and potential soil pollution. In 2017, the global biodegradable mulch films market is led by Europe. North America is the second-largest region-wise market.
