Biofertilizer are the substances which make use of microorganisms to fertile the soil. These fertilizers are not harmful to crops or other plants like the chemical fertilizers. They are actually taken from the animal wastes along with the microbial mixtures. Microorganisms are used to increase the level of nutrients in the plants. They let the plants grow in a healthy environment. They are also environment friendly and do not cause the pollution of any sort. Use of biofertilizers in the soil, makes the plants healthy as well as protect them from getting any diseases. Biofertilizer has a low concentration. The top five companies account for more than 12.56 % of market share. Novozymes, Agri Life, Symborg, xi'an Delong Bio-industry and Maboshi are the tycoons of Biofertilizer. Novozymes is the largest manufacturer, with the market share of 3.98% in 2015. In terms of application, biofertilizer can be applied in cereals&grains, pulses&oilseeds, fruits&vegetables and other. Pulses&oilseeds accounted for the largest market with about 44.33% of the global consumption for biofertilizer in 2015.
