Biogas is a renewable gas that is produced by anaerobic microorganisms. These microbes feed off carbohydrates and fats, producing methane and carbon dioxides as metabolic waste products. This gas can be harnessed by man as a source of sustainable energy. A biogas generator is made up of three main components; the biogas engine or power plant, the generator that is coupled with the engine and controller. The controller is a small component that makes the world of difference to the overall system performance. The biogas is supplied to the gas generator set by the gas storage tank through the desulfurizer, thereby driving the generator connected to the biogas internal combustion engine to generate electric power. Europe is the largest producer of swamp generators, accounting for nearly 55%, followed by North America and Japan. The key manufacturers are Caterpillar, INNIO (GE Distributed Power), Cummins, Kohler SDMO, MTU (Rolls-Royce), Yanmar(HIMOINSA), Siemens Energy (Dresser-Rand), Zichai Power, Ohara Corporation, Weifang Naipute, Inoplex etc. Caterpillar is the largest manufacturer with more than 20% market share. The top three manufacturers account for more than 50% of the market.
