### Abstracts

The global Bioimplants market was valued at 5869.33 Million USD in 2021 and will grow with a CAGR of 5.12% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Bio-implants are bioengineered products made up of biosynthetic materials such as collagen and tissue-engineered products like artificial skin and tissue. Bio-implants are used in organ transplantation and replacement of tissues. Bio-implants find application in cardiovascular, orthopedic, neurological, dental, and other areas. Increasing aging population is one of the key factors driving the bio-implants market owing to the fact that aged people are more susceptible to chronic diseases, such as cardiovascular diseases, orthopedic disorders, endovascular diseases, and dental disorders. Increasing geriatric population base and rising incidences of chronic conditions such as cardiovascular diseases, osteoarthritis, neuropathic (Alzheimer's and Parkinson's disease) and congenital diseases are the vital drivers for this market. Advanced technologies including 3D printing, laser technology and nanotechnology deployed to manufacture bio implants significantly enhance their biocompatibility, therefore, is expected to fuel the market growth during the forecast period. Bio implants includes biological implants (cell therapy, tissue engineering), biologised implants (technical implants, In-vivo cell lining) and bio functionalized implants (drug eluting stents). North America was the largest market, followed by Europe, and Asia. The U.S.

market is expected to face a slump in the coming years due to austerity measures taken by the Federal Government and rise in taxation caused due to the economic crisis of 2008. Uncertainty also prevails in the European region with the Euro crisis; hence, growth is expected to be minimal in this region for the next five years. Asia, however, will showcase higher growth mainly due to large investments from foreign firms and government funding.
