## Abstracts

The global Biological Pesticide market was valued at 1524.2 Million USD in 2021 and will grow with a CAGR of 9.35% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Biopesticides or biological pesticides are used for controlling various insects and against pathogens that cause diseases. The various forms of biopesticides include bioinsecticides, biofungicides and bionematicides. The benefits derived from the usage of biopesticides in agriculture and in public health, programs are considerable. The global consumption of biopesticides over chemical pesticides is increasing due to its ecofriendly nature. As biopesticides are target-specific they are considered to be relatively safer to non-target organisms including humans. Registration of biopesticides is very easy hence; most of the countries have switched from chemical pesticides to biopesticides. The main drivers for the biopesticide market include the switch from other crops to organic crops, which requires the use of biopesticides. The global consumer demand for biopesticides is increasing continually. The chemical pesticide market is declining continually due to the stringent regulations passed against its use due to the damage caused to the environment. These regulations occur specifically in Europe and America where the use of biopesticides as a substitute is widely accepted.
