The global Biometric Sensor market was valued at 1106.42 Million USD in 2021 and will grow with a CAGR of 7.14% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Biometry refers to statistical analysis of the biological data, that is, analysis of physical and behavioral characteristics. Sensors generally calculate electrical capacity, light, pressure, speed, and temperature. These sensors are compact in design, therefore can be installed in devices conveniently. It is a breakthrough technology, which eradicates various security-related issues from different domains. They are specially designed units made to scan and analyze the vein patterns or the unique features in your fingertip, becoming the necessity in the modern world. The global biometric sensor industry is poised to witness significant growth during the forecast period owing to increase in the cyber-attacks and security threats. However, high investment for R&D is projected to hamper the growth of biometric sensor market. The significant impacting factors include increase in security threat and rise in the demand for biometric sensors analysis in smart gadgets. In the past few years, the dependency on Internet has increased significantly, hence there is a need for better security and authentication methods. Biometric sensors are used in commercialized buildings, banking sectors, medical & research labs, and in smart weapons owing to their advantages.
