The global Biophotonics market was valued at 3456.36 Million USD in 2021 and will grow with a CAGR of 6.61% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact wwhich will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market verdors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The term biophotonics denotes a combination of biology and photonics, with photonics being the science and technology of generation, manipulation, and detection of photons, quantum units of light. Photonics is related to electronics and photons. Photons play a central role in information technologies such as fiber optics the way electrons do in electronics. Biophotonics can also be described as the 'development and application of optical techniques, particularly imaging, to the study of biological molecules, cells and tissue'. One of the main benefits of using optical techniques which make up biophotonics is that they preserve the integrity of the biological cells being examined. The worldwide biophotonics market is expected to witness a significant growth in the future, due to the rising old age population, along with the increasing incidence of chronic diseases. The other factors include, increasing use of biophotonics in cell and tissue diagnostics, emergence of nanotechnology in biophotonics, and development of novel photoacoustic tomography (PAT) system. The Asia Pacific biophotonics market is expected to grow at a CAGR exceeding 13% over the next few years. Due to the augmented investment in R&D activities, coupled with the increasing prevalence of cancer, the market is expected to witness a substantial growth. The

increasing healthcare expenditure and rising government initiatives are expected to fuel the demand for the regional market.
