The global Bioplastics Packaging market was valued at 7086.07 Million USD in 2021 and will grow with a CAGR of 10.99% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Bioplastics are primarily a biodegradable group of polymers that can be manufactured from renewable sources. Conventional plastics are increasingly becoming unpopular due to the fact that they can last for a very long time, can be hazardous to current life and the ecosystem in general, and rely heavily on the oil and gas industry for raw materials. Conventional plastics are used in nearly all industries as material for casings, electronics, packaging, and many other products. This high volume of products made out of materials that will not be degraded for centuries is creating a high level of concern, especially in developing economies, and emerging ones are swiftly following suit. Packaging solutions have incurred a predominant significance among every F&B company. Manufacturers of food products and beverages continue to adopt the most suitable packaging mechanism, befitting the packaging requirements of various kinds of products. Bioplastics packaging is, thus, expected to gain prominence in the global F&B sector, primarily due to the several advantages that it endures. Obtained from biomass sources, bioplastics or biopolymers are innovative packaging materials for food materials, the demand for which is deeply integrated to consumer preferences.?
