## Abstracts

The global Biopolymer Packaging market was valued at 7354.1 Million USD in 2021 and will grow with a CAGR of 12.01% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Biopolymers are the biodegradable polymers made of starch, sugar, cellulose and many more. Biopolymers coating in the packaging retard unwanted moisture transfer in food products, are good oxygen and oil barriers, are biodegradable, and have potential to replace current synthetic paper and paperboard coatings. Biopolymerbased materials have gathered attention from packaging industry due to rising concerns in recent years from environmental as well as economic perspectives of traditional petroleum based polymers. Pharmaceutical industry has seen a lot of regulatory action to raise the bar for packaging of products. It accounts for potential machines for 100% non-destructive inspection of seal integrity. Growing awareness among the population for the use of bio packaging to avoid various health issues has been contributing to the growth of the market. The packaging industry is under considerable regulatory and public pressure, and there is the potential for significant substitution of petrochemical polymers with biopolymers and bio-derived polymers. Packaging in general, is expected to experience high growth owing to the ageing population, smaller households and desire for better and more convenient packaging among the population. The need for packaging contributes to the high adoption rates for bio packaging, owing to increasing concerns,

such as global warming and green ecosystems, etc.
