The global Biotechnology Based Chemicals market was valued at 5506.08 Million USD in 2021 and will grow with a CAGR of 5.61% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Biochemistry, sometimes called biological chemistry, is the study of chemical processes within and relating to living organisms. Asia Pacific is expected to emerge as a key region for biotechnology based chemicals market owing to growing pharmaceutical industry in emerging economies such as China and India. Rising citric acid demand from food & beverage industry in China is expected to positively impact biotechnology based chemicals market growth in the region over the forecast period. Shift in consumer preferences towards bio based products usage owing to increasing awareness regarding health hazards associated with non-bio based products is projected to drive biotechnology based chemicals market growth in North America and Europe. Dominant animal feed industry presence in China and U.S. due to increasing lysine application as a supplement in swine and poultry feeds is expected to complement market growth over the forecast period. U.S. has many existing biorefineries which process corn into sugars, oils, food ingredients and animal feeds. Europe is expected to witness considerable market growth over the next seven years. However, there are certain hurdles such as lacking industry knowledge and applicable policies forcing shift in production capacities outside Europe despite the technological knowhow in the region.
