The global Bird Detection System market was valued at 7.7 Million USD in 2021 and will grow with a CAGR of 9.46% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Bird Detection System is the system used to detect birds. The system mainly used near airports to help prevent the occurrence of bird strikes. It is also used for other places, such as wind farms, and bird migratory studies. The Major regions to produce Bird Detection System are North America, Europe and Asia-Pacific, which accounting for about 90 % of sales revenue in total. North America is the largest sales region (sales value share 51.83% in 2016). Bird Detection System product demand is in a certain space, and the main consumer countries are moderately developed countries and developed countries. Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area; the future will still have more new investment enter the field. In the last few years, the total number of Bird Detection System developed by China domestic manufacturers is limited. This shows that the efforts to develop new product in China is not enough, but also shows that the allocation space of domestic Bird Detection System still need to expand. There is still a big gap compared with the imported Bird Detection System.
