The global Blanket Aerogel market was valued at 182.84 Million USD in 2021 and will grow with a CAGR of 21.17% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Aerogel is the lightest mesoporous solid material present on Earth. It is derived by the replacement of liquid component of gel with a gas. It comprises an interconnected nanostructure network with a minimum porosity of 50%. Aerogels are extremely porous and have low thermal conductivity that make them ideal insulation materials. In general, aerogels are available in several forms such as blankets, particles/powders, panels, and blocks among others. Among all, blankets are the most commonly used form of aerogels, owing to its ease of handling. Blankets are formed with the combination of silica aerogels and flexible fibers. In case of piping insulations, blankets are convenient for wrapping oil refinery pipes with suitable sheets. The market for blanket aerogel have witnessed tremendous growth in the European region. Eco-friendly initiatives taken by the government and growing concerns about vehicle ambience are the significant factors driving the growth of the European blanket aerogels market. However, high cost of production has hampered the growth of the blanket aerogels market in Europe.
