Abstracts

The global Blood Gas and Electrolyte Analyzers market was valued at 3311.16 Million USD in 2021 and will grow with a CAGR of 3.46% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact wwhich will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market verdors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Blood gas and electrolyte analyzers are used to measure different parameters from whole blood samples, such as pH, blood gas (pCO2 and pO2), electrolytes, and metabolites. The pH value of blood and serum or plasma is an indicator of the balance between the blood, renal (kidney), and lung (respiratory) systems, while the pCO2 value of arterial blood is used to assess efficient elimination of carbon dioxide from the body, a by-product of metabolism; and the pO2 value of arterial blood is a measure of oxygen absorbance by the body in the lungs. Electrolytes and metabolites give further information about body metabolism. Growth in number of patients being treated in ICUs, NICUs, and emergency departmen ts; rise in patients suffering from chronic diseases; technological advancement in blood gas & electrolyte analyzers, and increase in number of product approvals are the major factors that drive the market growth. However, complexity involved in the interpretation of blood analysis data act as a restraining factor for the market growth. Increase in investment by major medical diagnostics giants and improvement in the healthcare facilities in Asia-Pacific provide growth opportunities for the market.
