The global Blood Plasma Derivatives market was valued at 231.85 Million USD in 2021 and will grow with a CAGR of 9.8% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Blood plasma is the liquid component of blood constituting of water along with plasma components such as immunoglobulin, electrolytes, glucose, clotting factors, electrolytes, and hormones. It plays a crucial role in maintaining the electrolyte and osmotic balance while preventing infection and blood disorders in the body. Plasma derivatives are the concentrates of specific proteins, which require pooling of plasma from large number of donors. For instance, they require more than hundred plasma donations to produce sufficient immunoglobulin to treat an immune-deficient patient for one year. They are obtained by the process of fractionation where protein concentrates are separated and then clinically used. The growth of the global blood plasma derivatives market is majorly driven by increase in prevalence of life-threatening disorders, especially hemophilia. Other factors boosting the market growth include rise in adoption of blood plasma derivatives products, upsurge in geriatric population across the world, and increase in awareness about blood & plasma donation. However, factors such as high cost of plasma derivative-based therapy and post-operative risks associated with plasma replacement therapy hamper the market growth. Conversely, the development of enhanced methods for preservation of plasma derivatives along with advanced

procedures for fractionation and high potential in untapped markets in the emerging economies are expected to provide lucrative growth opportunities for the market.
