Abstracts

The global Blood Preparation market was valued at 3116.42 Million USD in 2021 and will grow with a CAGR of 3.32% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Blood is a mixture of various component including Red Blood Cells (RBC), White Blood Cells (WBC), plasma, and platelets that circulate continuously inside the body to provide nutrition, and oxygen to body, and removes waste from the body. The global blood preparation market is expected to grow at a significant growth rate during the forecast period owing to increasing prevalence of blood related diseases that results in growing demand of blood transfusion. Additionally, launch of new anticoagulants in the market, and presence of large unmet needs also boost the global blood preparation market. However, chances of transmission of diseases, allergic reactions, and some other adverse reactions such as hypotensive transfusion reaction, post-transfusion purpura (PTP), and transfusion-associated dyspnea (TAD) can restraint the market. According to WHO, about 5% of HIV infections are transmitted by unsafe transfusion due to unsafe donors, inadequately trained staff, irregular or inadequate supplies of materials to test, poor laboratory testing procedures, and unnecessary transfusions or absence of quality systems.
